

Design & Engineering of Intelligent Information Systems: PI8

Instructed by *Dr. Eric Nyberg*

Due on October 26, 2015

Vivian Robison vrobison

I deployed my pi7 coposite ranker that combines a bigram+unigram ngram ranker and a ranker that dependency parses the question to find the subject, then returns a boolean of whether that unigram is in the passage.

Difficulties encountered:

- The ur broker was broken during multiple early attempts.
- Eclipse was being its usual self.
- The example only had a aae, not a cpe, so I had to figure out how to connect the remote aae to the cpe
- Weird UIMA Fit issues found by multiple students, the solution on Piazza didn't quite work and the resulting error message was not helpful.

Run with

```
mvn exec:java -Dexec.mainClass="Main"
-Dexec.args="src/main/resources/inputData src/main/resources/outputData"
```
